Introduction

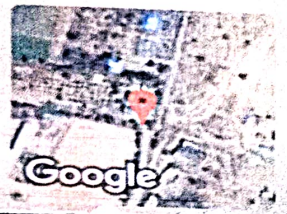

An Industrial visit was organized to the Katraj Dairy milk chilling centre located at otur. The main objective of the visit was to understand the process of milk collection, chilling, quality control, and storage before distribution. The visit provided practical knowledge about dairy technology and management.

Objectives of the visit.

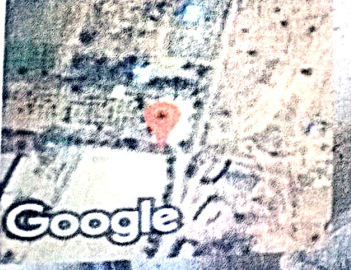

- To study the milk collection and chilling process
- To understand quality testing methods used in dairy plants.
- To observe storage and transportation facilities.
- To gain knowledge about dairy plant operations and management.

About Katraj Milk chilling centre

- ② Quality Testing: Samples are tested for fat content, SNF (Solid-Not-Fat), and purity using testing equipment.
- ③ Chilling Process: The milk is cooled to around 4°C using chilling tanks. Rapid cooling prevents bacterial growth.
- ④ Storage and Transportation: After chilling, milk is stored in insulated tanks and transported to the processing unit in tankers.

Machinery and Equipment seen

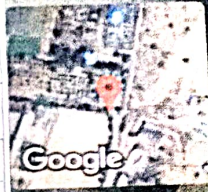

- 1) Bulk milk coolers (BMC)
- 2) Weighing Machines
- 3) Lactometer and fat testing machines
- 4) storage tanks
- 5) generator backup system.

Benefits of the chilling centre

- 1) Maintains milk freshness and quality.
- 2) prevents spoilage and contamination
- 3) Ensures safe milk supply to consumers.
- 4) Helps farmer with regular milk collection.
